

PYROWAVE

Encouraging Employees To Use More Sustainable Transportation

Pyrowave's mission is to develop the next generation of low-carbon materials through its microwave technology. To achieve this, we want to cultivate the next generation of talent who will want to put their creativity to work to achieve our environmental mission. It's all about putting your energy in the right place, and having fun doing it! Find out more about the story behind our new charging station!

Right Place

**CHARGING
STATION**

Installing a Charging Station on the Spot

It happened spontaneously. A Pyrowave employee came to work at the factory with his new electric car. Jocelyn Doucet, our CEO, was visiting the site that day and the technician briefly mentioned his new purchase adding, “It would be nice to have an electric car charging station in the parking lot.”

Our CEO was immediately open to the idea. He decided on the spot, to buy and install a charging station for the staff. Shortly thereafter, all Pyrowave employees were able to charge their electric cars at work, free of charge. It was an initiative that made everyone happy and fell perfectly in line with the company's own vision: to electrify the future.

A Green Community

Beyond an electric car charging station, examples of eco-responsibility can be found throughout Pyrowave. Here are a few examples:

- Our food suppliers are local - organic fruits and vegetables delivered to employees during the season.
- We moved our head office in a certified WELL and LEED building downtown to make it more accessible by public transit and by bike.
- Our partners have sustainable development goals as ambitious as ours.
- Our projects are structured to reduce our environmental footprint as the new generation of manufacturing processes. We measure GHG emissions avoided and we prioritize working on projects with the highest potential for GHG reduction.
- Our internal events and promotional items are eco-friendly. For example, we have developed hoodies from recycled organic cotton fibers!
- Our suppliers have social and ecological missions.

“At Pyrowave, we work every day to make a difference on our planet. We don’t compromise when it comes to optimizing our carbon footprint, whether it’s for employees or for company processes,” shares one employee. A spirit of community reigns around this desire to protect the environment. Green initiatives - such as installing a car charging station - are an integral part of our corporate culture.

Put Your Energy in the Right Place

Pyrowave offers an opportunity for its staff to “put their energy in the right place.” In other words, we have a positive impact, and we are making a difference for our world today and tomorrow. Through electrification, but also through the community of committed employees. Working at Pyrowave means participating in something bigger than yourself. It means capitalizing on ecological values and impacts for ourselves and for all of humanity.
